

Install the Junovy Chat Apps

Use any of the following:

- Web app: Sign in from your browser using <https://chat.junovy.com>.
- Desktop app (Windows, macOS, Linux): Best for daily work with native notifications and tray controls.
- Mobile app (iOS, Android): Stay connected on the go; supports push notifications and offline drafts.

Desktop (Windows/macOS/Linux)

- Download and install the [Rocket.Chat Desktop app](#) from the official app store or release page.
- On first launch, enter your workspace URL <https://chat.junovy.com> and sign in.
- Enable “Launch at login” and “Keep running in tray” if you want background notifications.

Mobile (iOS/Android)

- Install the Rocket.Chat mobile app from your device’s app store.
 - [iOS App Store](#)
 - [Google Play Store](#)
- Tap “Connect to a server”, enter the <https://chat.junovy.com> URL, and sign in.
- Allow notifications when prompted; you can fine-tune later per-room.

Web

- Open the <https://chat.junovy.com> URL in any modern browser.
- For best performance, enable desktop notifications when prompted.

Tip: You can be signed in on web, desktop, and mobile at the same time. Notifications are smart — the last active device typically receives the alert.
